Category: [Sailing Yacht](#)

S/Y Dwinger is a unique mega sailing yacht, a magnificent, innovative sailing yacht with all the advantages of a motor yacht. Her 50 meter aluminium hull was custom built by Royal Huisman, world leaders in advanced marine technologies, and at 63 meters tall (constructed with 15,000kg of carbon fibre) she holds the world record for largest freestanding mast. The mast supports two sails totalling 1000m² which rotate on an aerorig, an advanced sailing system which offers an exceptionally smooth ride when compared to motor yachts and significantly less tilt when compared to regular sailing yachts. Enhanced comfort through stability is just one of the many advantages that this enticing mega yacht has to give.

A sailing yacht of such grand proportions would normally require a crew of at least fifteen, all of whom need a cabin; this seriously compromises the living space and privacy of the guests. The Dwinger sails with a highly skilled crew of seven.

There is so much extra room on board the Dwinger, due to the excellent aerorig system which maximises space and minimizes rigging, that unlike normal sailing yachts, or indeed many motor yachts, she has 100m² of free garage and also enough deck space allowing her to be stocked full of all kinds of watersports equipment, which can be quickly and efficiently lowered into the sea using her 2500kg deck crane. On board for your ultimate entertainment you will find a stunning 1952 Riva motorcraft, with a new Mercedes diesel engine, a Bombardier Explorer six seater jet boat, a rib, a two person sail boat, two jet skis (one is a stand up model), two windsurf kits and two kite surf kits. The real head turner though, the kind of toy usually only enjoyed by James Bond, is the Suzuki Amphibious Car, capable of transporting you from the boat through the water to the beach, then up onto the road and right into town.

Modern design aims to search for green energy and the Dwinger meets this target too, at a sailing speed of just 5 knots her self rotating propeller generates 300hp of energy, enough to provide electricity throughout the boat. Solar panels are also in place to make the most of the natural energy from the sun.

Always ahead in technology the Dwinger has HIFOG, the most advanced fire safety system available, which permitted her interior designers to include an open kitchen, a luxury popular with all the best Michelin Starred restaurants, allowing the guests to experience the joy of watching the chefs prepare their delicious creations close up.

The Dwinger is incomparable to other 50 meter craft of both the sail and motor variety in terms of stability, has an unrivalled array of extras, and with her slick interior which lends more to high performance than ornamentation, her futuristic design is sure to please all those who choose to sail with her. Experience the Dwinger, built with passion, for the love of the sea.
